

Introduction

The purpose of these exercises is to build upon the last lab by replacing the window forms into web forms, allowing for a more authentic customization using HTML styles and structure

Exercises

- Exercise 1 : Like before I created the three layers, created the model, the repository and the services for the Users. Applying EntityFramework to connect them together, but this time instead of Window Forms I used the Web Forms. Now instead of using a GUI to create and move the components around, the web form is entirely written and customized by coding.

Customer Management

ID:

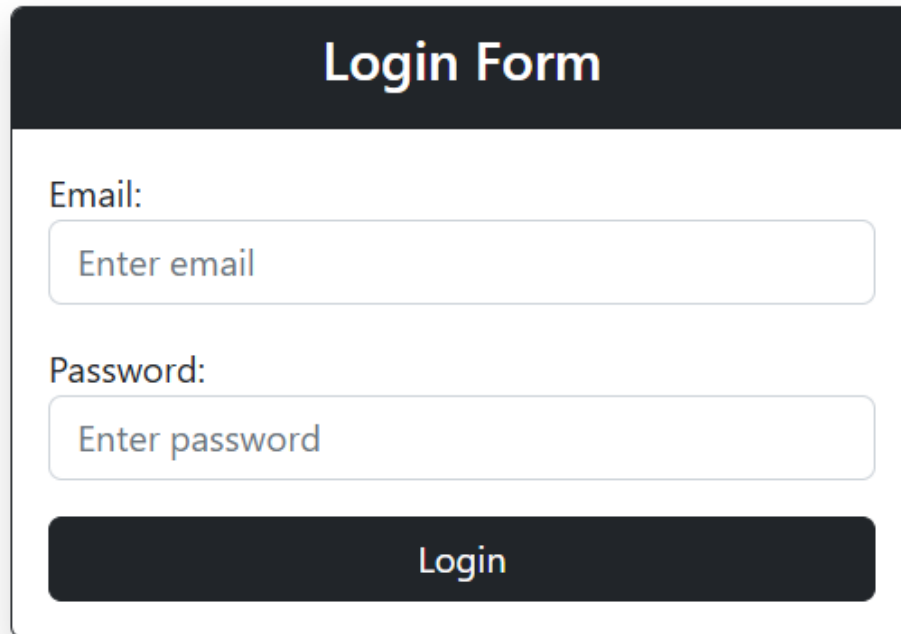

Name:

Email:

Id	Name	Email
1	John Doe	john.doe@tdtu.com
2	Jane Smith	jane.smith@tdtu.com
3	Trung Pham	trung.pham@tdtu.com
4	Emily Davis	emily.davis@tdtu.com
5	Thai Pham	thai.pham@etdtu.com

- Exercise 2: Like above, instead of creating a Customer Management website, I created a simple login page. Now, this wasn't in the prompt/exercise, but I also took

the time to learn and apply Bootstrap. Unfortunately, this was my biggest mistake as I did not know how long this would take and was too stubborn to think of the deadline approaching. In all honesty, I should have used AI to write the page for me since the exercise didn't need to make it pretty. But nonetheless, I am happy with the look of it and I sincerely apologize for not managing my time well lately(which leads me to be unable to finish the homework as of now)

The image shows a login form with a dark blue header containing the text "Login Form" in white. Below the header, there are two input fields: "Email:" and "Password:". The "Email:" field has a placeholder text "Enter email" and the "Password:" field has a placeholder text "Enter password". Both fields are white with a light blue border. Below the input fields is a dark blue button with the text "Login" in white.

- Exercise 3 : For exercise 3, I have put it inside the folder with exercise 2 for more convenience. Originally I was going to style the customer, products and supplier management website as well but unfortunately I couldn't fit them in on time. Back to functionality, I wasn't sure on how to perform this exercise(specifically the Supplier and Products forms), so I had to write up some basic SQL code and wanted to try dealing with Foreign Keys via EF. This part took some ingenuity but it wasn't too bad, then I connected the web forms together and rewrite the Customer code to fit the Supplier and Products form

107	fan	555.23	2

Conclusion

After everything, I will have to say that I am not quite proud of myself. Yes I have learned a new technology and how to implement it, but I am truly ashamed of myself for not being able to finish the homework. I promised you and myself that this situation wouldn't happen again, and I have utterly failed that promise. I am aware of the lab report summary on the E-Learning website, and I hope that I will be able to finish what I have started

Sincerely, Huỳnh Trung Tín
